EIGHTEENTH ANNUAL REPORT
OF THE
BUREAU OF INDUSTRIES
PARTS I. AND II.

1899.

TO THE HONORABLE THE MINISTER OF AGRICULTURE :

Sir,—I have the honor to present herewith Part I. of the Eighteenth Annual Report of the Bureau of Industries, being the Agricultural Statistics of Ontario for the year 1899 ; also Part II. relating to Chattel Mortgages.

I have the honor to be, Sir,

Your obedient Servant,

C. C JAMES,
Secretary.

TORONTO, August 28th, 1900.

CONTENTS.

PART I.—AGRICULTURAL STATISTICS.

	PAGE
THE WEATHER: General review, showing the monthly <i>temperature, rainfall and sunshine</i> for the ten years 1890-9	7
THE GRAIN CROP: General description as to condition and harvest:	
Fall Wheat	9
Spring Wheat	11
Barley	11
Oats	11
Peas	11
Beans	12
Rye	12
Buckwheat	12
Corn	12
FIELD ROOTS: General description.	
Potatoes	13
Carrots	13
Mangels	13
Turnips	13
Sugar Beets	13
HAY AND CLOVER: General description.	13
Clover seed	14
FRUIT AND FRUIT TREES: General description.	14
MISCELLANEOUS:	
Flax	15
Tobacco	15
Hops	15
Lucerne	15
Rape	15
Farm supplies	15
Fall Plowing	16
Threshing and Marketing	16
Farm Improvements	16
LIVE STOCK AND THE DAIRY: General review as to condition in 1899.	
Live Stock	16
Average value per head	17
Poultry	17
The Apiary	17
The Dairy	18
Cheese Factories	18
Creameries	18
LABOR AND WAGES: General condition, with statistics of average wages of <i>farm laborers and domestic servants</i> for ten years	19
STATISTICS OF THE WEATHER: Showing details by months and stations or districts.	
Temperature, 1899	20
Temperature 1882-99	21
Rain and Snow	22, 23
Sunshine	23

	PAGE
Toronto Observatory.....	24
Register at Lake Temiscamingue	25
RURAL AREA ASSESSED : Showing by counties as taken by municipal assessors for 1899, the total area, acres cleared, acres in woodland and acres in swanp or waste lands ; also totals for the Province for the ten years 1890-9j.....	26
STATISTICS OF FIELD CROPS ; Showing by counties the area, produce and market values for the year 1899, together with totals for the Province for the past ten years and the averages for the period 1882-99 ; also the averages per acre.	
Fall Wheat.....	27
Spring wheat	27
Barley.....	28
Oats.....	28
Peas.....	29
Beans	29
Rye	30
Buckwheat	30
Corn	31
Potatoes.....	32
Carrots	32
Mangel-wurzels	33
Turnips	33
Hay and clover	34
All field crops, as above.....	34
RATIOS OF AREAS UNDER EACH CROP IN 1899 PER 1,000 ACRES OF CLEARED LAND ..	35
PASTURE—ORCHARD—VINEYARD—APPLES.....	36
STATISTICS OF LIVE STOCK : Showing by counties the number and value of stock on hand July 1, 1899, together with the number and value of those sold or slaughtered during the year ending June 30, 1899 ; also comparative totals for the Province.	
Horses	37
Cattle	38
Sheep	39
Hogs	40
Poultry	41
WOOL : Showing by counties the clip in 1899.....	42
BEEES : Showing by counties the number of colonies and value (including outfit).....	42
VALUES OF FARM PROPERTY : Showing by counties the value of farm land, farm buildings, implements and live stock ..	43
Farm values per acre occupied.....	44
Value of buildings, implements and live stock per acre cleared	44
Rentals of leased farms.....	44
MARKET PRICES : Showing for the leading markets of Ontario the average prices of agricultural products for the last six months of 1899, with comparative averages for the Province for ten years.	45
CHEESE FACTORIES : Showing by counties the number of cheese factories in operation in 1899, the quantity and value of cheese made, the number of patrons and the amount paid to patrons, together with the totals for the Province for ten years	46

PART II.—CHATTEL MORTGAGES.

CHATTEL MORTGAGES ON RECORD : Showing by counties the number and amount of chattel mortgages on record and undischarged on December 31, 1899, against (1) all occupations, (2) farmers ; also totals for the Province for ten years.....	47

ONTARIO BUREAU OF INDUSTRIES.

PART I.—AGRICULTURAL STATISTICS.

THE WEATHER.

While the nature of the soil and the method of tillage are important factors in the raising of crops, much also depends upon temperature, precipitation and sunshine. Untimely frosts may do great injury, and a too heavy precipitation, or the absence of rain for too long a period, may alter the prospects of the growing crops. Sunshine, too, has an important bearing upon the proper maturing of both grain and fruit. In the light of these facts the following weather tables will be found both interesting and instructive.

TEMPERATURE. The following table gives the average temperature of the Province for the calendar year and for the six months from April to September inclusive—practically the growing season—for the past ten years, and also the average for the eighteen years, 1882-99 :

Months.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1892.	1891.	1890.	1882-99.
January.....	18.7	20.2	19.5	18.4	17.3	23.1	10.3	17.0	20.9	24.9	17.4
February.....	15.2	22.0	21.8	19.2	14.5	16.9	14.7	21.9	23.4	24.1	18.3
March.....	25.8	35.6	29.0	21.2	21.5	34.9	26.4	25.2	26.2	24.7	25.6
April.....	44.5	42.1	42.7	46.3	43.3	44.3	38.7	40.3	43.0	41.5	41.6
May.....	55.7	55.5	52.9	60.1	56.9	53.7	52.2	52.2	51.9	50.0	53.6
June.....	64.8	65.6	60.9	64.8	68.0	66.1	67.6	65.4	65.4	65.6	64.3
July.....	67.5	70.2	71.9	68.8	65.5	69.1	68.3	68.3	63.7	67.2	67.7
August.....	68.5	67.7	64.2	67.2	65.3	64.0	66.1	66.6	64.8	63.1	65.5
September.....	56.2	61.8	60.8	56.8	60.5	61.1	56.0	58.8	61.5	56.5	58.3
October.....	50.0	48.7	50.1	43.4	41.4	48.8	48.2	46.6	46.1	46.8	46.1
November.....	38.0	34.9	34.9	37.8	31.5	31.6	35.1	33.1	35.1	35.2	34.9
December.....	25.1	22.8	24.6	24.1	25.8	27.7	20.7	21.8	31.5	18.8	24.3
Annual mean.....	44.2	45.6	44.4	44.0	42.9	45.1	42.0	43.1	44.5	43.2	43.1
Mean for six months April-September..	59.5	60.5	8.9	60.7	59.9	59.7	58.2	58.6	58.4	57.3	58.5

The ten stations from which the above averages are derived are situated at Saugeen (Bruce Co.), Birnam (Lambton), London (Middlesex), Woodstock (Oxford), Stoney Creek (Wentworth), Toronto (York), Lindsay (Victoria), Gravenhurst (Muskoka), Ottawa (Carleton) and Rockliffe (Renfrew). The details will be found in Tables I and II (pages 20 and 21). The mean temperature for the six months, was one degree below the average of the preceding year, but was one degree above the average of the past eighteen years. The mean temperature for the whole year shows similar results, ranging from 38.4 at Rockliffe to 48.5 at Stoney Creek.

PRECIPITATION. The fall of rain and snow in the winter months is given in the following table for ten years, together with the average for the eighteen years. An inch of rain is estimated to be the equivalent of ten inches of snow :

Year.	November.		December.		January.		February.		March.		Total for five months.	
	Rain. Snow.		Rain. Snow.		Rain. Snow.		Rain. Snow.		Rain. Snow.		Rain. Snow.	
	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.
1899.....	1.67	9.6	0.74	24.6	1.50	13.2	0.76	8.0	1.78	22.1	6.45	77.5
1898.....	3.40	8.9	1.73	17.5	1.47	18.2	0.60	18.9	2.42	1.0	9.62	64.5
1897.....	2.51	6.2	0.37	9.6	1.15	17.3	0.89	14.1	1.52	12.7	6.44	59.9
1896.....	2.47	7.7	2.22	13.2	0.65	17.1	0.46	24.5	0.74	11.4	6.54	73.9
1895.....	0.78	11.4	1.49	6.6	0.77	31.3	0.08	12.0	0.41	10.8	3.53	72.1

1893.....	2.09	10.8	0.68	11.6	0.43	25.5	0.73	24.3	1.19	5.4	5.12	77.6
1892.....	3.91	7.4	1.84	6.4	0.44	21.7	0.66	16.7	0.50	7.7	7.35	59.9
1891.....	2.46	4.3	0.35	20.1	1.37	13.9	1.77	13.3	1.46	19.7	7.41	71.3
1890.....	2.37	11.0	3.20	6.3	2.59	12.9	1.60	12.9	0.81	13.1	10.57	56.2
1882-99....	2.18	8.8	1.31	15.4	1.07	20.5	0.92	16.2	1.10	11.5	6.58	72.4

The rainfall for the Province for the five months comprising the table was 6.45 inches, being slightly less than the average for the years 1882-99 ; but the snowfall amounted to 77.5 inches, or 5.1 inches more than the average for the eighteen years. November and December were marked by light rainfalls and heavy precipitations of snow, while January and February were characterized by an unusually light fall of snow. The total precipitation for March was nearly double of the average of that month. The precipitation for the whole year by districts will be found in Tables III and IV (pages 22 and 23).

The growing season, however, is limited mainly to the six months, April-September, and the rainfall during the month of that important period is shown in the following table for ten years, together with the averages derived for the eighteen years, 1882-99 :

Months.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1892.	1891.	1890.	1882-99.
	in.	in.	in.	in.	in.	n.	in.	in.	in.	in.	in.
April.....	1.10	1.45	2.52	1.26	1.49	0.99	2.61	1.15	1.77	2.07	1.53
May.....	3.43	2.43	3.38	2.10	2.36	5.72	3.35	3.64	1.07	3.24	2.89
June.....	2.46	2.83	2.83	2.39	1.37	2.32	3.15	4.54	1.84	3.75	2.80
July.....	2.78	1.11	5.36	2.79	2.02	1.72	2.44	2.73	3.50	2.79	2.56
August.....	0.81	2.64	2.62	2.86	2.81	0.84	2.67	4.26	3.93	3.22	2.52
September.....	3.72	2.94	0.83	4.47	2.67	3.73	1.94	3.84	2.03	2.03	2.61
Total for the six months April-September....	14.30	13.40	17.54	15.87	12.72	15.32	16.16	20.16	14.14	17.10	14.91

The total rainfall for the Province for the six months was 14.30 inches, or .61 inch below the average for 1882-99. The north-west and north district had the heaviest precipitation, 16.80 inches being registered for the six months, while the rainfall in the west and south-west was five inches below the average. August was one of the driest months on record, an average of only .81 inch of rain having fallen, compared with 2.52 for the eighteen years.

SUNSHINE. The following table gives an annual comparison by months for the past ten years of the average hours of sunshine in the Province as derived from the records of the stations at Woodstock, Toronto, Barrie, Lindsay and Kingston. The

averages for the eighteen years 1882-99, are also given as well as the totals for the calendar year and for the six months, April to September :

*302.5 in 1892 and 1896.

The sunshine in 1899 exceeded the records of the past eighteen years, the total for the six months in the growing period exceeding the average by 79 hours, or over 55 per cent of the possible. The details of the five stations will be found in Table V (page 23). The Meteorological register for Toronto will be found in Table VI (page 24), and the summary for the Lake Temiscamingue district in Table VII (page 25).

THE GRAIN CROPS.

FALL WHEAT. An enlarged area of fall wheat was reported by correspondents writing in November, 1898, the increase being placed at from ten per cent, up, a few claiming to have actually doubled their acreage. Sowing ranged from the last week of August to the first week of October, but the bulk of the work was done between the 10th and 20th of September. Conditions were favorable to seeding, and as correspondents wrote most of the fields looked very promising, although in some cases the crop was so heavy in the top that cattle and sheep were turned in to pasture upon it. The Hessian fly was reported in several of the western counties, and as a result some of the fields were more or less yellow in appearance. The general outlook, however, was described as encouraging so far as the new crop of fall wheat was concerned. Dawson's Golden Chaff, Clawson, Genesee Giant, Manchester, Democrat and Surprise were regarded as the favorites, the first two named having a large lead, while forty other sorts also were named as being in favor.

The May bulletin contained the following regarding fall wheat: "The weather during the winter and the early spring has been exceedingly unfavorable for fall wheat, and as a consequence the crop, which promised well before the snowfall, has been greatly injured by the inclemency of the season, and is practically a failure in many localities. The want of snow in most places left the ground exposed to unusually severe and protracted frosts, and the heavy rains formed pools of water which froze and killed the young plants in the hollows and flooded lands. The dry weather which has prevailed in some neighborhoods since the opening of the growing season has also wrought some injury. A considerable percentage of the area sown to fall wheat is being plowed up. It must be borne in mind, however, that the winter just past has been an exceptionally trying one, for it has been the rule for years for fall wheat to come through the winter with compar-

atively little loss in area, and usually in a very promising condition. The peculiarity of the past winter, and an explanation of its effect upon fall wheat, will be clearly understood by referring to the weather tables. Contrary to usual experience the heavy snow fall came in December. This had disappeared over a large area of Ontario when the week of low temperature occurred in February. In January and February, the two coldest months, there is usually found plenty of snow upon the ground to protect vegetation. As a rule this crop appears to have wintered better on clay or heavy land than on light soils, although the experience of correspondents is by no means unanimous on this point. The situation of the land, and the degree of shelter afforded from wind and frost by its location, appear to have been considerably more influential factors in deciding its suitability for fall wheat growing than the character of the soil. In many cases it has been observed that the partial protection afforded by accumulations of snow near the fences, the rest of the field being bare, has saved the wheat plants thus protected. It is worthy also of note that the reports from Algoma, where there was a good covering of snow during the winter, are more favorable than those from the older settled counties. There are slight losses from insect pests reported, wire worms and the Hessian fly having appeared last fall in a few localities in the western part of Province. At the time correspondents wrote rain was urgently needed at several points to insure the remaining crop."

The following summary of reports appeared in the August bulletin: "This crop came through the winter in poor condition, much of it having been killed owing to the lack of shelter and the formation of ice, and a considerable acreage was plowed up. With the exception of Algoma, and a few other sections where there was plenty of snow, the yield has turned out to be a very small one — in fact the lowest for a number of years. The quality of the grain ranges from plump and hard to small and shrunken, even in the same localities, and sometimes in the same fields. Along the fences and in sheltered spots, as pointed out by a number of correspondents, the best fall wheat has been found, which fact shows the importance of wind-breaks. Rust has been more common than usual this year. The Hessian fly was complained of in a few of the western counties, but insect injury was light compared to the damage done to the crop by the trying weather of February. The time of cutting ranged from the beginning of July to the close of the month, according to location and date of sowing. The weather at harvesting was on the whole favorable, and the crop was got in in good condition."

November reports thus summed up the condition: "The extent to which fall wheat suffered from winter-killing entailed a considerable decrease in the yield, and, later, unfavorable conditions have made the falling off greater than was anticipated. The crop has been a poor one in many parts, more especially in the west, the grain being light and shrunken, owing to over-rapid ripening. Rust and chess have occasioned injury in some directions, but there has been a notable absence of insect pests. Reports from the eastern counties are slightly more favorable, although some loss is indicated to grain on low lying lands from heavy summer rain storms. In the northern and north-western portions of the Province the fall wheat has yielded well"

The acreage, yield and value by counties for 1899, together with the totals for the Province for ten years, will be found in Table IX (page 27).

THE NEW FALL WHEAT. The November bulletin said: "Owing, no doubt, to the unsatisfactory experience of this season the acreage devoted to fall wheat has been, if anything, somewhat reduced. Reports from many of the western counties indicate a decrease which will be hardly counterbalanced by some increase in the Lake Ontario counties. The time of seeding covers a wider range than usual, owing to the dryness of the ground, which induces many farmers to postpone sowing until late in the season in the hope of rain. As usual, most of the work appears to have been done in the earlier half of September, the ground in most localities being in good condition, apart from the lack of moisture. The young plants are generally looking well, having received the benefit of later rains, and, although somewhat backward in places seem promising and cover the ground well, having a heavy top. There are few complaints of insect pests, except that Hessian fly, joint worm and wire worm have done some damage. There is little change in the varieties sown, Dawson's Golden Chaff and Red Clawson retaining their popularity, while the Manchester, Genesee Giant and Democrat come next on the list."

SPRING WHEAT. The following relating to spring wheat was contained in the August bulletin: "This variety of wheat is more largely grown in the eastern half of the Province. The yield is above the average, and the quality of the grain is on the whole satisfactory. The greatest drawback to the crop was the wet weather prevailing at seeding-time, the ground being so moist and heavy in many quarters that sowing had to be delayed. Heavy rains have also occurred a few weeks before harvesting, and from various localities reports are made of the straw lodging. Complaints of rust have also been received. While some had harvested their spring wheat by the end of July, a large acreage was still left standing uncut at that date."

According to correspondents writing in November, the same causes which had injuriously affected the fall wheat, more especially the dryness of the season and the prevalence of rust, were felt by the spring wheat crop. In some localities the grain was light, but the general tenor of the reports from those neighborhoods where the crop is still grown was encouraging, and indicates a fair output.

The acreage, yield, and value by counties, together with the totals for the Province for ten years, will be found in Table IX (page 27).

BARLEY. The August reports regarding barley were on the whole favorable, as will be seen from the following, which appeared in the bulletin published in that month: "This has been a highly successful crop, both as regards yield and quality, and at the time our correspondents wrote had been secured in excellent condition in the Lake Erie and Lake Ontario counties, while harvesting was progressing favorably in other sections. The falling off in the demand for barley for malting purposes some time since caused considerable reduction in the acreage devoted to its cultivation, but latterly the largely increased requirements for this grain for stock feeding purposes have brought it again into favor, and this season the area sown to barley has been increased. Much of it grown for feed is sown mixed with peas and oats. The principal cause of injury has been the drouth, which in some cases has resulted in short straw and small kernels, though the grain is for the most part plump and bright. Rust has affected the later varieties in some eastern localities, and slight damage is reported from smut in two western counties, but as a whole the crop has sustained remarkably little injury from pests or parasites."

The foregoing estimate of the barley crop was confirmed by the following statement in the November bulletin: "There has been an exceedingly good crop of barley in all parts of the Province. The yield is large and excellent in quality, the berry being usually plump and bright, though in some instances discolored. The crop has suffered but little from parasites, though a few cases of smut and rust are mentioned by correspondents."

The acreage, yield and value by counties, for 1899, together with the totals for the Province for ten years, will be found in Table X (page 28).

OATS. The August bulletin had the following regarding oats: "This crop is rather backward in many parts, so that correspondents could not speak positively as to the yield, but the reports are as a rule highly satisfactory, and the estimates yields sent in, average high. The crop bids fair to be a large one, with fine straw and plump grain in those neighborhoods where the drouth has not interfered with its growth. In a number of instances, however, the long continued dry weather has resulted in short straw and light kernels. But little damage has been inflicted by insects, although there has been considerable loss by rust and smut, more especially in the western counties. The late sown oats appear to have flourished better than the earlier crop where they have had a fair supply of moisture." Following is a summary of the November reports concerning the crop: "Oats have been a particularly fine crop in all localities, the grain being generally full and heavy, and the production per acre in excess of the average. Grasshoppers and smut have wrought some injury in a few neighborhoods, but the principal and most widespread drawback has been rust. The late sown crops have been specially subject to its attacks, and have also been lighter than those planted early in the season."

The acreage, yield and value by counties, for 1899, together with the totals for the Province for ten years, will be found in Table X (page 28).

PEAS. The following reference to peas was contained in the August bulletin: "Reports as to the condition of the pea crop are somewhat variable, but as far as can be judged by present indications there will be above an average yield. A good deal of injury

was caused by excessive rains early in the season, more especially to low-lying fields, and in many localities losses have been sustained by the ravages of the "bug." In some parts the area sown to peas has been decreased owing to the prevalence of this pest. Grass peas are being substituted for the more common kinds in some cases. The late sown crops being not yet ripe, much depends upon the weather in the interval before harvesting."

The November bulletin said: "The pea weevil or 'bug,' as it is popularly termed, has wrought much havoc with this crop, but for which the crop would have been above the average, as reports from localities which are free from the pest are mainly favorable. There has also been some damage from excessive rains. Peas appear to have done considerably better in the eastern counties than elsewhere."

The acreage, yield and value by counties, for 1899, together with the totals for the Province for ten years, will be found in Table XI (page 29).

BEANS. August reports concerning beans were thus summarized: "The area devoted to this crop has considerably diminished, owing to low prices. Beans are grown only in a few localities, more especially in the western Lake Erie counties and the extreme eastern section. Appearances point to a large yield per acre, but the drouth is an unfavorable condition, and if continued the result may be different. Some correspondents note that the harvest is later than usual."

According to the November bulletin the bean crop had felt the effects of drouth severely, and the returns were very variable. Where produced in eastern localities it appeared to have yielded better than in the western counties.

The acreage, yield and value by counties, for 1899, together with the totals of the Province for ten years, will be found in Table XI (page 29).

RYE. There is very little rye grown, and what is raised in some parts is mainly used as feed. According to August reports a considerable percentage of the crop was winter-killed, but the remainder had thriven and yielded well, both as regards straw and grain.

The reports of correspondents in November were on the whole favorable, and indicated a return slightly above the average.

The acreage, yield and value by counties, for 1899, together with the totals for the Province for ten years, will be found in Table XII (page 30).

BUCKWHEAT. This crop is not largely grown. The November bulletin said: "This will be a light output, owing to the injury occasioned by the dryness of the weather and losses sustained by frost. The grain is frequently small, while the yield has been fairly good."

The acreage, yield and value by counties, for 1899, together with the totals of the Province for ten years, will be found in Table XII (page 30).

CORN. Regarding this crop the August bulletin said: "The cold and wet weather prevailing at the time corn should have been planted delayed that work considerably, and the consequence is that at the time of reporting the crop is hardly as far advanced as usual. A good deal of poor seed was also used throughout the Province, and this necessitated some replanting. Notwithstanding these drawbacks reports come from some counties of a most promising crop, the favorable weather of the latter part of July having brought the crop along with a bound. Of course there are also a number of poor prospects. In some western counties crows and blackbirds did injury, and cut-worms and grubs were also spoken of in several sections of the Province. However, taking all the reports received, the crop is likely to turn out to be a fair one should the lateness of the season not bring it into frosty weather. Several correspondents report the erection of new silos this year."

The November reports were to the following effect: "This has been a bad year for corn. Much of it matured too early, the ears being small and light, and there were serious losses from frost and floods, so that there will be considerable shortage in the crop. There will be a fair yield for silage in the west and the Lake Ontario counties, but further east and north the crop is decidedly poor. There is but little mention of insect pests, the only noteworthy cause of loss under this head being the destructive attacks of grasshoppers in one or two neighborhoods."

The acreage, yield and value by counties, for 1899, together with the totals for the Province for eight years, will be found in Table XIII (page 31).

FIELD ROOTS.

The acreage, yield and value of the root crop by counties, for 1899, together with the tables for the Province for ten years, will be found in Tables XIV and XV (pages 32 and 33).

POTATOES. The August bulletin had the following: "There promises to be a good yield of potatoes, though in many quarters rain is badly needed, and in consequence of long-continued drouth the early potatoes have been somewhat small in size. Reports as to the present appearance of late potatoes are generally favorable, one especially encouraging feature being the decrease in the numbers and destructiveness of the potato bug, caused by the severe frosts of last winter. In some neighborhoods, however, this pest is still as active and injurious as ever, and on low-lying lands a good deal of damage was occasioned by excessive wet in the early part of the season."

The following was contained in the November bulletin: "The potato crop is, for the most part, of excellent quality, having been housed in sound condition and free from disease, except in a few localities where rot has appeared, which in some cases attacked the crop after it was taken up. The plant has been remarkably free from injury from insect pests. The effect of the drouth in numerous neighborhoods has been to seriously diminish the yield. The comparative effect of early and late planting has been very variable. In the western section the later planted seem generally to have yielded better than the earlier varieties, while in the eastern counties the reverse was the case in some instances. The exceptionally fine fall weather was specially favorable to the securing of the crop."

CARROTS. This crop suffered at seeding time on account of the weather being too wet. As the season progressed, however, the prospects of the crop improved, and the November bulletin had the following to say of carrots: "Reports as to the carrot crop indicate a fair production, probably somewhat below the average because of the drouth, owing to which the development of all root crops has been unfavorably affected. In some of the western counties considerable damage by grasshoppers is noted."

MANGELS. Like other root crops, mangels suffered from too much moisture at the time of seeding. However, when correspondents reported in August the crop was looking well. The November bulletin thus described the condition of the crop: "The yield of mangels has been on the whole satisfactory more especially in the Lake Erie counties, though the effect of the dry weather in many localities is noticeable in light yields and small roots. The quality of the crop, as a rule, is first-class, and the great bulk of it has been safely got under cover."

TURNIPS. According to August reports turnips at that time presented a poor appearance in many cases, especially where late sown, and therefore more liable to feel the effects of the drouth. Some damage from the effects of the grasshopper, turnip fly, and other insect pests was noted. The November bulletin, describing the crop, said: "The drouth has seriously injured the turnips, in common with other crops, and the yield, as a rule, has been light in all sections. The best returns have come from those sown early in the season. Insect ravages are reported from many quarters, some damage having been done by cabbage worms and grasshoppers. The crop has been nearly all in good condition."

SUGAR BEETS. The November bulletin contained the following reference to sugar beets: "This crop is confined to comparatively few localities, and has thriven considering the want of moisture at a critical season, owing to which the roots were frequently small. It had, practically, been all housed at the time the returns were received."

HAY AND CLOVER.

May reports were not encouraging. The bulletin published in that month said: "A large proportion of the clover crop in every section of the Province has been winter-killed, owing to the scarcity of snow, the plants being either heaved or frozen in the ground by exposure to the severity of the weather. The thinness of the old growth by reason of the drouth of last season, and the poor catch on newly seeded areas, contributed to this result. The damage appears to have been greatest in the Lake Erie and Lake Ontario

groups, while the most favorable showing is made by northerly localities, where the snow remained on the ground to a later date. Where the crop survived the winter the fields are generally in a healthy and flourishing condition, and promise well, although in some quarters clover is beginning to suffer for lack of moisture."

The August bulletin contained a more cheering report regarding the crop. It said: "The production of hay and clover is just about the average for the seventeen years 1882-98, the principal cause of the shortage being the heavy frost of last winter, which in the absence of snow killed a great deal of the clover in every part of the Province. Drouth has been another, though a minor factor, in decreasing the yield. The quality of the crop is generally very highly estimated, it having been got in as a rule in excellent condition, though in some of the western counties rain interfered a good deal with the haying, and caused some injury, more particularly to that cut early in the season. On the whole, however, the loss from this cause has been but trifling. Some correspondents anticipate a scarcity of clover seed." The acreage, yield and value by counties, for 1899, together with the totals for ten years, will be found in Table XVI (page 34).

CLOVER SEED. The following was the November report regarding clover seed: "A large proportion of the clover crop was winter-killed, and consequently the yield of seed under any circumstances would have been much below the average. Correspondents are almost unanimous in stating that the drouth has so injured the second crop that very little seed has been secured. The midge has also proved destructive in many neighborhoods. The few favorable reports received are mostly from the eastern section of the Province."

The area in red clover seed is estimated at 64,937 acres, and in alsike 21,463 acres

FRUIT AND FRUIT TREES.

According to May reports fruit trees and shrubs were in leaf at an earlier date than usual. The bulletin then published went on to say: "Reports as to the condition of fruit trees vary in different sections, and sometimes in the same locality. In the peach-growing region known as the Essex district many peaches have died during the winter, while in the Niagara District the loss reported is small, particularly near the lake shore. In the Lake Erie group some plums and pears have also sustained injury during the winter, but, generally speaking, there has not been serious injury to fruit trees other than peaches. A majority of correspondents speak of an abundant bloom on orchard trees, and some fear that the blossoms are out so early that the late spring frosts may attack them. There are some references to black-knot on the plum, but the chief trouble complained of is the appearance in large numbers of the tent caterpillar. Several correspondents express their confidence in spraying as a means of checking this and other insects and fungous pests. In the western part of the Province a number of correspondents state that small fruits, particularly raspberries, have suffered from the trying winter."

The following appeared in the August bulletin: "There is likely to be a scarcity of fruit this season owing to various causes. The severe winter destroyed a large proportion of the fruit trees in some sections, and appears to have injured many which survived. Heavy rain during the blossoming season greatly interfered with fertilization, as did frost in some neighborhoods. The tent caterpillar, curculio, codling moth and other injurious insects have also made great havoc among the orchards, except where they have been kept in check by systematic spraying. The apple crop is very light, but as a rule the quality is good, and the fruit fairly free from scab. The winter varieties promise better than the earlier kinds. Plums have done rather better than apples, though greatly subject to attacks of the curculio. The yield in most localities where they are grown is poor, but they will be abundant in some places. The peach crop is practically a failure owing to the general destruction of the trees, which suffered more severely from the winter than did the other varieties. Those which remain have born fairly well in some neighborhoods, but the total product is small. Pear trees have not been so prolific as usual, and the supply will be light. There was about an average crop of cherries, though some damage from worms and black-knot is specified. Reports concerning the vineyards are highly encouraging, the vines being healthy and well laden, promising an abundant supply of grapes. Berries and small fruits have been generally plentiful and good, though in many localities they have run rather small in consequence of the drouth."

The November bulletin had the following regarding fruit: "The condition of fruit trees and vines, as a rule, is excellent, the principal drawbacks being the effects of the drouth in a few localities, injuries from winds and recent snow storms, and more especially the damage inflicted by tent and forest caterpillars, which has been severe where spraying has been neglected. These and other insects—notably the codling moth—have seriously affected the apple crop, much of the fruit being wormy and inferior. Another cause of shortage was the heavy rain while the trees were in blossom, which interfered with fertilization. In most fruit-producing sections there was, however, a considerable surplus, especially of apples, over local demands, and many heavy shipments are noted, though the crop on the whole was much below the average. The quality was very variable. Pears, plums and grapes in excess of home requirements were also produced in some parts, although the early frosts spoiled the grapes in some instances. Owing to the wholesale destruction of peach trees last winter the output of this fruit was very limited. There was an abundance of small fruits, as well as a plentiful growth of the wild varieties in the back townships. But little mention is made of the San Jose scale, and curculio and black knot are hardly as much in evidence as formerly."

The areas in orchard and vineyard and the yield of apples by counties for 1899 will be found in Table XVIII (page 36).

MISCELLANEOUS.

FLAX. This crop is not now largely grown, as a number of the mills in Western Ontario have been closed for some time. Where raised it has been a fair crop this season. The area was 7,103 acres, as against 10,720 in 1898, and 16,240 in 1897.

TOBACCO. August reports were to the following effect: "Correspondents in Essex and Kent, where tobacco raising has been chiefly tried in this Province, report that the area in leaf is very much smaller this year than in the previous season, owing to the poor market. The plant is regarded as being a little late this year, but with the exception of reports of injury from 'cut-worms' and grasshoppers, it is generally regarded as being in good condition."

The following was contained in the November bulletin: "There has been a great falling off in the cultivation of tobacco, and there are but few reports concerning this product by our correspondents. It appears to have been generally successful where grown."

The yield of tobacco is estimated at 2,241,562 pounds from 2,206 acres, or 1,016 pounds per acre. Of this amount the County of Essex produced 1,636,760 pounds from 1,411 acres. The production in 1898 was 10,560,590 pounds from 7,871 acres, of which Essex contributed 7,095,970 pounds from 5,086 acres.

HOPS. The acreage in hops is placed at 1,146, of which about five-sixths is grown in the Counties of Northumberland, Prince Edward, Lennox and Addington, and Grenville.

LUCERNE. Correspondents have referred to lucerne more frequently of late, and it appears to be steadily growing in favor.

RAPE. Rape is coming into general use, more especially for turning off sheep and cattle in the fall. As a rapid finisher for lambs it is in great favor, especially in the western half of the Province. The area in this crop was 33,762 acres against 36,651 in 1898.

FARM SUPPLIES IN THE SPRING. The May bulletin thus summed up the situation: "A considerable quantity of hay beyond that necessary for home requirements remains in the hands of farmers in most localities, the low prices prevailing having been insufficient to bring it to the market. In many places, however, the extra demands of the late spring have left them with little, if any, available surplus. Oats are much scarcer, and the remaining supply will mainly be required for stock feeding. A large proportion of the wheat harvest is yet retained by those who can afford to do so in the hope of an increase in price. The great demand for cattle at good figures has resulted in the sale and shipment of an unusually large number of fat and store animals, so that there is almost a universal scarcity, especially of the former, some places being left with an insufficient supply for local slaughtering demands. Several correspondents note that farmers are be

ginning to realize that it is more profitable—at least when feed is selling at a low price—to fatten their own stock for market instead of selling them as store cattle. This tendency of course somewhat reduces the supply both of coarse grain and of stockers for export. Its permanency will naturally depend upon the relative prices of feed, and of fat as compared with lean cattle."

FALL PLOWING. The following appeared in the November bulletin: "The fine autumnal weather has enabled farmers to make good progress with their fall plowing, as the ground, for the most part, was in splendid condition, excepting in a few localities where operations were delayed somewhat by drouth. Late harvests is another reason assigned by some correspondents for backwardness. Generally, however, conditions have been highly favorable, and advantage has been taken of them to get the work done early. In some instances the ground has been plowed over more than once to kill out weeds and to increase fertility."

THRESHING AND MARKETING. When correspondents wrote early in November the progress in threshing and marketing was thus reported: "Threshing has been finished except in a few localities, the work being lighter than usual by reason of the shortage in the wheat crop. A comparatively small portion of the product has as yet been marketed, as farmers are not disposed to let their wheat go at the prevailing prices where they can afford to hold it. Barley, oats and peas have been sold freely where a surplus was available, but an increasingly large percentage of the coarse grains is retained for stock feeding."

FARM IMPROVEMENTS. The following reference to farm improvements appeared in the November bulletin: "There has been fair progress made in underdraining, the work being chiefly done by hand, tile drain machines not having given satisfaction as a rule. A great deal of fencing has been done, principally of wire. Barbed wire has gone out of vogue, and plain and woven wire fences, with iron posts, appear to be most in favor, although some appear to prefer a combination of wood and wire. An unusual amount of improvement has been made in farm buildings, more especially in bank barns, etc."

LIVE STOCK AND THE DAIRY.

LIVE STOCK.—Correspondents in May reported to the following effect: "As a rule live stock have wintered well and are in good condition, fodder being abundant, though some correspondents note a scarcity, especially in the east and on the Lake Erie frontier. Many of the cattle are reported rather thin in flesh, though healthy. The market for both horses and horned cattle is brisk and prices good. Horses have suffered in some places from influenza and distemper. Sheep have been remarkably prolific, and the young lambs are mostly strong and healthy, though in a few localities considerable losses have taken place. The most serious disease affecting live stock has been an ailment described as crippling or rheumatism, which has destroyed very large numbers of pigs, especially the younger animals, in almost every part of the Province. The cause of this disorder is supposed by some to be overfeeding with grain during the long confinement of the winter months."

The August bulletin said: "Reports as to the condition of pastures, and the effect upon the supply of fodder and dairy produce, vary greatly according to locality. In the Lake Erie and Lake Ontario Counties and some other parts the pastures are generally dried up and bare, resulting in a considerable falling off in the supply of milk and a shortage in dairy produce, with discouraging prospects for the keep of cattle during fall and winter. The latter difficulty, however, has been largely met by the more general planting of corn and the storage of ensilage, so that no scarcity is apprehended unless in exceptional cases. In the northern and eastern parts of the Province, where more rain has fallen, the pasturage has remained good, with abundant supplies of milk for dairying purposes, and prospects of a plentiful supply of feed for stock. In addition to drouth another cause which has resulted in a decrease of the milk supply is that more calves are being raised than usual in some parts. Live stock as a rule are in good condition, with a marked absence of anything like serious disease, the principal drawback being the prevalence of the horse-fly, which has been very troublesome in many cases."

The condition of live stock was thus commented upon in the bulletin issued in November: "Fall pasturage, as a rule, has not been good, the fields in most localities being dry and bare until a comparatively late period in the season, when they were revived to some extent by the heavy rains. Live stock are reported in a healthy condition, though thin for the most part in consequence of short pasture, but there is no allusion to any form of animal disease by any of our correspondents. Very little has been done in any part towards fattening stock for market, and a great many cattle have been sold off as stockers at good prices, so that there is a decided scarcity of saleable cattle in many parts, more especially in eastern Ontario. The practice of stall feeding appears to be falling off to some extent. Sheep where kept, have generally done well, and, in some instances, farmers find it profitable to fatten sheep and lambs on rape. Hogs are plentiful, and are being continually shipped to market; but present prices are low, and if continued will have a tendency to discourage hog-raising. There is plenty of fodder in nearly all localities for the winter's supply, especially of corn and coarse feed, but the hay crop has been light and it commands a high price in many places. Some correspondents also notice a shortage in roots. Corn has been very largely grown for fodder purposes, both as ensilage and dry feed. The use of the silo is steadily increasing, though the partial failure of the corn crop in some neighborhoods has operated against the movement. The almost universal silage material is corn, the leading varieties being the Leaming, Mammoth Southern, Compton's Early and Yellow Dent."

The statistics of live stock will be found on pages 37-43. The following table gives the average value per head of stock on hand for the past eight years:

Classes of Live Stock.	1899	1898	1897	1896	1895	1894	1893	1892

Ducks.....	29							
Other fowls.....	22	22	21	22	22	23	25	24

POULTRY. The November bulletin had the following: "The returns regarding the poultry industry are generally of a highly encouraging character, indicating that farmers in all parts are devoting more care and attention to this department, and engaging in poultry raising more extensively than hitherto. The profits have been good wherever fowls have received proper treatment. The egg production has been above the average and prices have been remunerative. A large number of turkeys are ready for the market in some parts, though the season was not too favorable for raising them successfully. Poultry, generally, are in fine condition, and there has been but little disease of any kind."

THE APIARY.—It was difficult to sum up the condition of bees in August, judging by the bulletin issued in that month, which said: "Reports vary considerably concerning

bees. Some correspondents regard swarming as being satisfactory, while others state that there was very little increase in the number of colonies, and that the winter was a trying one. Clover blossoms were not abundant, and in some sections basswood was injured by caterpillars. A few correspondents report as high as seventy-five pounds surplus honey per hive, but a number go as low as ten and even five pounds per hive. The average will be about twenty-five pounds. The buckwheat crop will in many instances decide whether the bees will have to be fed back or not."

The November bulletin thus reported regarding the apiary: "Bees wintered badly, many hives having been lost. The season has been very unfavorable for honey production, there being little nectar available, and the supply of honey will be a good deal short of the average; and the quality is frequently inferior. There have been but few swarms. The bees, as a rule, are in a healthy condition, there being but little mention made of foul brood. Owing to the light yield of honey it will be necessary in many cases to supply colonies with winter food.

THE DAIRY. The August reports pointed out the fact that owing to drouth the milk supply was rather less than ordinary in nearly every part of the Province excepting the northern and eastern sections. It was also reported that more calves than usual were being raised, which also in some degree affected the output of milk.

The November bulletin contained the following: "The dairy industry, though injured to some extent by the dryness of the season, has, on the whole, been flourishing under the stimulus of good prices. In many parts, more particularly in the west, the manufacture of butter is gaining upon that of cheese, though the latter still generally maintains the lead as a factory product. The movement for the manufacture of butter in cheese factories in the winter season has become general. There is a noticeable improvement in the quality of the butter output, and the price is universally higher than last season. There is but little change in the breeds of cattle kept for milk. The Durham grade retains its old-time predominance as a general-purpose cow, but in the eastern counties, where cheese-making is a specialty and beef qualities less regarded, the Ayrshire and Holstein strains are much in favor."

CHEESE FACTORIES. The statistics of the cheese industry are given by counties in Table XXVIII (page 46), together with totals for the Provinces for ten years. There was a slight increase in the number of factories in operation, but the make of cheese fell off five million pounds from the preceding year. The value of the cheese, however, is the highest in seventeen years, the nearest approach being 1897, when \$400,000 less was received for the cheese output. The increased market prices has put \$10,682,193 (being an increase over 1898 of \$2,264,658) into the hands of the patrons for milk supplied, delivered at the factory.

CREAMERIES. The following comparative table gives the statistics of the creameries operated in Ontario for the seven years 1893-9, showing the quantity and value of butter made, the average number of patrons, the average price of butter per pound and the amount paid to the patrons for milk or cream supplied.

Year.	No. of creameries in operation.	Butter Made.		Average No. of Patrons.	Average price of butter per pound.	Milk to make one pound of butter.	Amount paid to the patrons for milk or cream.
		Quantity.	Value.				
		lb.	\$		cts.	lb.	\$
1899.....	323	9,113,964	1,746,362	22,090	19.16	23.75	1,448,411
1898.....	282	9,008,992	1,632,234	22,741	18.12	23.99	1,294,220
1897.....	214	7,708,265	1,403,609	18,909	18.21	23.97	1,139,463
1896.....	170	6,033,241	1,101,232	12,245	18.25	24.13
1895.....	135	4,553,708	868,382	9,664	19.07	24.75
1894.....	115	3,162,550	662,297	8,298	20.94	23.79
1893.....	74	2,707,570	574,156	7,852	21.21	23.58

The number of creameries operated includes the skimming stations.

The amount received by the patrons in 1899 was equivalent to 66.9 cents per 100 pounds of milk as compared with 60.6 cents in 1898 and 63.1 in 1897.

The patrons of many creameries also get the buttermilk free of charge.

LABOR AND WAGES.

The following are the opinions of correspondents as summarized in the August bulletin: "The demand for farm labor is still decreasing, owing to the now frequent practice of doing all the ordinary farm work without other assistance than that furnished by the family, or the exchange of work among neighbors. The falling off in the extent to which the hiring system has been adopted renders the supply of help in most localities fully adequate, except during the temporary pressure of the harvest. Complaints of of scarcity come from many quarters, owing to the laborers leaving for Manitoba and the North-west, or entering upon other employments in the Province. Great difficulty has consequently been experienced in obtaining extra men for the harvest season in some neighborhoods. The variation in the rate of wages paid is so great, even within the limits of the same county, that it is difficult to indicate average figures that will not be either misleading or present so wide a margin that will be of little utility. As a general thing wages appear to be somewhat higher in the west than in the east, with a slightly upward tendency. About \$1 or \$1.24 per day with board seems to be about the standard or average wages for harvest hands, though as low as sixty or seventy cents is quoted as the figure in some cases; while on the other hand the scarcity of help in some neighborhoods has raised the figure to \$1 50 and even \$2. The rate for monthly engagements with board usually ranges between \$15 and \$20, anything over this limit being for a short engagement covering the summer season, while arrangements for a long term are frequently made at considerably lower figures."

The November bulletin said: "Except at harvest time, when there was a scarcity of help in many quarters, the supply of farm laborers has been sufficient for the demand. Correspondents report the exodus of a large number of young men from Ontario farms to the Northwest, and some are of opinion that this will mean an increase in farm wages in this Province in the near future. Others claim that the rate of wages now paid is as high as employers of agricultural labor can afford to give, and that improved machinery is rendering farmers more and more independent of outside help. Domestic servants on the farm are reported scarce, as usual."

The following table gives the average rates of wages paid farm laborers by the year and by the month, with and without board, for ten years, together with the average for eighteen years; also the monthly wages paid domestic servants on the farm:

Farm Laborers.	1899	1898	1897	1896	1895	1894	1893	1892	1891	1890	'82-99
Per year in yearly engagements:	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$
With board.....	149	148	144	144	150	156	160	156	158	167	157
Without board...	243	246	236	243	246	247	255	253	257	253	250
Per month for working season:	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.
With board.....	15 38	15 31	14 29	14 57	15 38	16 55	17 13	16 52	16 66	16 88	16 74
Without board ..	24 93	25 44	24 47	24 11	25 45	25 61	25 97	25 92	25 81	26 56	26 16
Domestic servants per month.....	6 19	6 09	5 97	6 11	6 07	6 23	6 47	6 21	6 25	6 23	6 21

TEMPERATURES OF 1899.

TABLE I. Showing for each month the highest, lowest, mean highest, mean lowest and mean temperature at the principal stations in Ontario in 1899; also the annual mean for each station.

CONTENTS.

MUNICIPAL STATISTICS :

PAGE

Comparative tables as to <i>population, assessed values, taxation and debts</i> of Ontario municipalities.....	v
Summary financial statement for all the municipalities of Ontario, being the aggregate of the several items of <i>Receipts, Disbursements, Assets and Liabilities</i> for ten years 1889-98	vii

POPULATION, AREA, ASSESSED VALUES AND TAXATION in 1899 :

Showing details for municipalities arranged in alphabetical order, together with the average rate of taxes per head of population, and the average rate on the dollar :	
Townships	2
Towns.....	32
Villages	38
Cities	46
Showing total for township, town, village and city municipalities grouped into county limits, and giving comparative totals for "county limits" for 1889 and 1899	52
Comparative totals for the Province for fourteen years	58

RECEIPTS, DISBURSEMENTS, ASSETS AND LIABILITIES FOR 1898 :

Showing an abstract statement- of municipalities arranged in alphabetical order :	
Townships	2
Towns.....	32
Villages	38
Cities.....	46, 70
Counties.....	48
Comparative aggregates for ten years :	
Townships	60
Towns.....	62
Villages	64
Cities	66
Counties.....	68

EXEMPTIONS : Showing by municipalities, the exemption by by-law from general taxes, though subject to school taxes	72
--	----

PART III.—MUNICIPAL STATISTICS.

The following statement is compiled from the summarized tables and gives population, total assessment, amount of taxes imposed for 1899, the amount of debenture and floating debt, together with the amount paid each year by all municipalities of the Province for interest for the thirteen years 1886-98 :

Year.	Popula- tion.	Total assessment.	Taxes imposed for all purposes.			Debenture debt.		Floating debt.	Interest paid on loans and deben- tures.
			Total.	Rate per head.	Mills on the dollar	Total.	Rate per head.

* Statistics of debts for 1899 are not yet complete.

EXEMPTIONS—Municipalities were asked to report "the amount of exemptions from general taxes by by-law, but subject to school taxes." The returns show that 21 townships report such exemptions, aggregating \$84,678; 31 villages, \$288,714; 46 towns, \$2,669,182, and 5 cities, \$3,476,555, making \$6,519,089 for 103 municipalities. This amount is included in the \$816,765,473 given above.

Incidentally, 14 municipalities report \$1,005,302 as exempted by by-law for all purposes. These will be fully enquired into for a later report, including such exemptions as "fixed assessments."

The following tables show the variations in population, assessment, taxation and debenture debt according to the various classes of municipalities, since the Bureau has been receiving returns direct from municipalities :

POPULATION.

Year.	Townships.	Towns.	Villages.	Cities.	Total.
1899.....	1,109,806	318,145	133,921	448,876	2,010,748

MUNICIPAL EXEMPTIONS.

TABLE XIV.—Statement showing by municipalities the "exemptions from general rate by by-law but subject to school tax," for the year 1899.

NOTE—These are entirely exclusive of statutory exemptions, but a few are given in which the by-law exempted from all taxes. Complete returns, however, have not been received at this date.

Municipalities.	For all purposes except Schools.	Totally exempt by By-law.	Municipalities.	For all purposes except Schools.	Totally exempt by By-law.
